

LIGHTING OVERVIEW

Luminaire level lighting controls for installers

Reduce callbacks with LLLC

Showing up to the job site with a clear plan on installation, programming, and handoff helps eliminates surprises and reduces the need for future callbacks:

- 1 /** Prior to installation, discuss the sequence of operations with the customer, so you understand what settings they want in each space.
- 2 /** Familiarize yourself with the programming needs and capabilities of the selected LLLC system before arriving on site.
- 3 /** Once the project is close to completion, walk through the system and settings with the facility manager or building owner, so they feel comfortable making lighting changes in real-time.

Key features and benefits

Simple installation: Wireless, pre-programmed systems streamline initial setup, allowing installers to complete projects faster.

Energy code compliance: LLLC systems meet energy code requirements at both the state and local level, so installers can move forward confidently, knowing the system already meets complex code requirements.

Flexible and future-proof: LLLC systems can be rezoned and reconfigured without changing wiring or climbing ladders, allowing the lighting to easily be optimized for tenant needs. An app keeps systems up to date with the latest performance and security enhancements.

Training support: Manufacturer representatives, distributors, utilities, and [NXT Level Training](#) often offer ongoing training, resources, and project support. The good news is that LLLC systems work similarly — so once you've learned one, you'll be well prepared to handle the rest.

Energy savings: Thanks to integrated sensors and advanced controls, LLLC can save building owners and facility managers up to 75% in energy usage compared to standard LED fixtures.

Utility incentives: Most Northwest utilities offer financial incentives to reduce the upfront cost of LLLC for both new construction and retrofit projects. Your local utility can walk you through the process, answer questions, and make sure you get the incentives you qualify for.
